DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12/12/05 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over LeMarie,III et al. 5366477 in view of Strait 2334449. LeMarie discloses a medical instrument with a shaft 18, a handle 14 mounted on the proximal end of the shaft 18, and a tool (50,52) mounted on the distal end of the shaft 18 and activated by the handle 14, wherein the handle 14 and the tool (50,52) are in active connection by means of at least one activation rod (20) and the tool (50,52) can be secured detachably by means of a tool shaft on the activation rod (20), for which purpose the tool shaft (242) and the activation rod (248) have protuberances (246) which can be joined in a form-locking connection with corresponding recesses (244), wherein the recesses (244) and protuberances (246) corresponding to one another are configured in such a way that the

tool (50,52) and the activation rod (20) can be brought into engagement with one another by means of a movement exclusively in one direction essentially perpendicular to the longitudinal axis of the activation rod (20). Note figures 1-3,11a, 1b and 12. LeMarie discloses the invention as claimed except the claimed coupling between the activation rod and the tool. However, Strait discloses such coupling between male member 10 and female member 11. It would have been obvious to one having an ordinary skill in the art at the time the invention was made to modify LeMarie by using the coupling as taught by Strait to provide an easy and quick connection and

Regarding claim 2, LeMarie teaches the tool (50,52) secured to the activation rod (20) in such a way that forces can be transmitted in the longitudinal direction of the activation rod (20) and/or torsion forces can be transmitted to the tool (50,52).

disconnection between the two members of the coupling.

Regarding claim 3, LeMarie teaches the tool (50,52) and the activation rod (20) connected with one another by means of a motion essentially perpendicular to the longitudinal axis of the activation rod (20).

Regarding claim 4, LeMarie teaches the activation rod (20,204,274,304) and the tool shaft (242) configured as essentially round in cross-section.

Regarding claims 5-7, LeMarie teaches the recited connection means of the claim with the stud (212,214) and hole 216. Note figure 11a-11b.

Regarding claims 8-9, LeMarie teaches the recited spring 332.

Art Unit: 3731

Response to the Applicant Remarks

3. Applicant's arguments filed on 10/11/06 have been fully considered but they are

not persuasive. The arguments regarding the detachable connection as in the amended

claim 1 are not convincing because the claimed connection is clearly discloses by the

Strait reference.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Charles H. Sam whose telephone number is (571) 272-

4703. The examiner can normally be reached on Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Anhtuan T. Nguyen can be reached on (571) 272-4963. The fax phone

number for the organization where this application or proceeding is assigned is 703-

872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
